USE THIS AS YOUR **SERVICE-DAY OPERATOR WORKFLOW**.

PRE-SERVICE SETUP (10–20 MIN BEFORE)

1. Open VersePoint.
2. In top bar, pick the correct display (`Screen X`) for projector.
3. Go to `Web Out` tab:
- Start server.
- Copy the shown URL into OBS Browser Source.
- Confirm OBS is receiving output.
4. In `BG > Media`, select the background folder and verify thumbnails load.
5. In `Style`, load your preferred preset and confirm font/size/alignment.
6. Turn `Send to Screen` ON and verify projector + Web Out match preview.

BUILD THE SERVICE PLAN

1. In `Program` (left tab), create a folder (e.g. `Sunday Service`, optional date).
2. From `Scripture`, select verses and click `+` → add to Program.
3. From `Lyrics`, add songs to Program from each song menu.
4. In Program items:
- Apply per-item background if needed.
- Apply per-item style if needed.
- Use “Style All” on folder if you want uniform look.

LYRICS PREP

1. Open a song in `Lyrics`.
2. Paste full lyrics into `Auto Split Full Lyrics`.
3. Set `Lines Per Slide` and optionally enable `Keep section blocks together`.
4. Click `Apply Split`.
5. Spot-check slide flow using `Prev/Next` and arrow keys.

****LIVE OPERATION DURING SERVICE****

1. Keep `Send to Screen: ON`.
2. Navigate in `Program` and click the next verse/song item.
3. For scripture:
- Select verse in center list to push that verse live.
4. For lyrics:
- Use arrow keys (`Left/Right` or `Up/Down`) to move lyric slides.
5. Use `Clear Text` (or hotkey) when pastor/speaker wants clean background.
6. Use hotkeys:
- Clear/Show: `Cmd+Shift+C` (Mac) / `Ctrl+Shift+C` (Win)
- Send ON/OFF: `Cmd+Shift+S` / `Ctrl+Shift+S`

****IF SOMETHING LOOKS WRONG MID-SERVICE****

1. Wrong Bible version: reselect item from Program (auto-switches version), or set correct version in Scripture tab.
2. Text too large/small: quick adjust in `Style > Text & Type` then continue.
3. Background too distracting: set solid/gradient quickly in `BG > Colors & Gradients`.
4. OBS not updating: check `Web Out` server status and URL in OBS source.

****AFTER SERVICE****

1. Click `Export All` to create a `.vp` backup.
2. Keep one dated backup per service day.
3. Close app (state persists for next launch).
