Install VersePoint On macOS

1. Open VersePoint-1.0.0-mac-universal.dmg.
2. Drag VersePoint.app into Applications.
3. Eject the mounted DMG.
4. In Applications, right-click VersePoint.app → Open.

If you get: "*VersePoint is damaged and can't be opened. You should move it to the Trash.***"**
This is **normal** for unsigned apps.

Only do this if you trust the app/source.

1. Open Terminal.
2. Run this command: 👇

```
xattr -dr com.apple.quarantine /Applications/VersePoint.app
```

And try opening app again: In Applications, right-click VersePoint.app → Open.

If still blocked

1. Go to System Settings → Privacy & Security.
2. Scroll down and click Open Anyway for VersePoint.
3. Try launching again.
