VersePoint

# Windows Installation Guide

Safe setup for Windows 10 and Windows 11

**UNSIGNED BUILD** Use the normal installer and keep Windows security enabled

## Quick overview

The Windows installation pack contains one x64 installer for standard Intel or AMD Windows 10/11 PCs. Extract the ZIP, follow the installer, and approve only the VersePoint file you trust.

### 1 Unzip

Extract the downloaded VersePoint Windows ZIP file.

### 2 Install

Run VersePoint-Setup-1.1.0-x64.exe and follow the wizard.

### 3 Approve

If SmartScreen appears, use its normal approval screen carefully.

NORMAL INSTALLATION

# Install VersePoint

Start with the normal Windows installer route.

1

## Unzip the installation pack

Right-click the downloaded ZIP, choose Extract All, then open the extracted folder.

2

## Open the x64 setup file

X64 RELEASE

Double-click VersePoint-Setup-1.1.0-x64.exe. Select Yes if Windows asks whether the installer may make changes.

3

## Follow the setup wizard

Choose the installation folder if needed, select Install, and wait for setup to finish.

4

## Launch VersePoint

Select Finish, then open VersePoint from the Start menu or its desktop shortcut.

### Supported Windows PCs

This stable package is intended for 64-bit x64 Windows 10/11 PCs with Intel or AMD processors. It does not include a native ARM64 installer.

IF WINDOWS WARNS YOU

# Approve the trusted installer

An unsigned build may show Windows protected your PC.

**Safety first**

Continue only if the file came from the official VersePoint release or another source you trust. Do not approve a renamed or unexpected file.

1

## Read the warning

Confirm that the blocked file is the VersePoint Setup installer you intended to open.

2

## Select More info

This expands the SmartScreen window and may show the application name and publisher information.

3

## Select Run anyway

EXPECTED

Use this only after you confirm the file is the trusted VersePoint installer.

4

## Complete setup

Return to the installation wizard and finish the normal installation steps.

**Run anyway is not available?**

Stop here. Do not disable Microsoft Defender, SmartScreen, Smart App Control, or church IT security just to install VersePoint. Ask the computer administrator for help.

FIRST LAUNCH

# Connect and verify the projector

Complete these checks before using VersePoint in a service.

## First projector check

- Connect the projector, TV, or second display before opening VersePoint.
- Open Settings and choose the correct Projector Screen.
- Select Screen: ON and verify the actual external display, not only Preview.
- Confirm Output status shows Projector Live and Text On.

## Common installation problems

- This app cannot run on your PC: confirm Settings > System > About shows an x64-based processor.
- Windows on ARM: this stable package does not include a native ARM64 installer.
- Installer will not open: re-download the official ZIP and extract it before running setup.
- Managed church computer: ask the administrator to approve or deploy VersePoint.
- Projector not listed: reconnect it, then reopen Settings and choose the display again.

### Keep the included Operator Workflow

Use the VersePoint Operator Workflow PDF for service preparation, Programs, Service Flow, Audio, Web Output, and live-operation guidance.
